

Information Sheet

ICD 9 to 10 Translator value proposition

What is the *Translator*?

A solution developed by McGladrey, the *Translator*, is a Business Discovery tool which identifies the impact of the ICD 10 transition to your organization.

Action:

Where does this help my organization? The options are endless.

Discovery: The *Translator* assists hospitals, providers and other health care organizations in understanding what the transition to ICD 10 will mean to them. The application is designed to educate, assess, inform and analyze both the financial and operational effects of transitioning to the ICD 10 coding structure.

- Build Assumptions for future planning
- Calculate the delta using KPIs

Benchmarking: *The Translator* contains baseline analytics to evaluate the impact of ICD 10 on hospitals, clinics, service lines, departments and physicians. Using QlikTech's business intelligence product, QlikView, you can develop your own customized analytics.

- Identify financial impact based on Case Mix Index
- Reallocate resources, budget, and educational focus

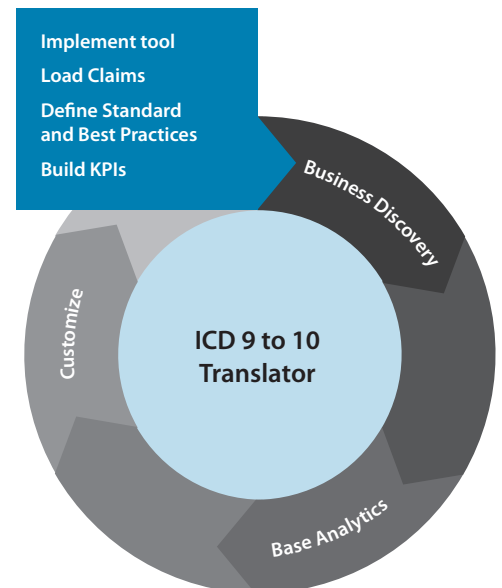

Business intelligence: Because the *Translator* is a business intelligence application, you have an unlimited ability to analyze and examine data, extending the value of your initial investment well beyond the ICD 9 to 10 transition.

- Sustain Medicare Reimbursement
- Commercial Payer Opportunities

Bottom line:

The *Translator* can help with an understanding of:

- Revenue protection
 - Case mix index
 - CC/MCC capture rate
 - Denials
- Cost savings
 - Coding productivity
- Cash flow
 - DNFB
